this thesis takes an empirical approach to understanding of the behavior and interactions between the two main components of reinforcement learning the learning algorithm and the functional representation of learned knowledge the author approaches these entities using design of experiments not commonly employed to study machine learning methods the results outlined in this work provide insight as to what enables and what has an effect on successful reinforcement learning implementations so that this learning method can be applied to more challenging problems

experimental design procedures for behavioral sciences fourth edition is a classic text with a reputation for accessibility and readability it has been revised and updated to make learning design concepts even easier roger e kirk shows how three simple experimental designs can be combined to form a variety of complex designs he provides diagrams illustrating how subjects are assigned to treatments and treatment combinations new terms are emphasized in boldface type there are summaries of the advantages and disadvantages of each design and real life examples show how the designs are used
